

Light Does WHAT!?!?

By Mrs. Brinza

(Sung to the tune of *Row, Row, Row Your Boat.*)

Light, light, interacts...
In five different ways.
Diffract, refract, absorb, transmit
Don't forget reflect!

Diffract, diffract, diffract...
Light spreads out.
Diffraction happens when the light,
Spreads out.

Refract, refract, refract...
Light bends or breaks.
Refraction happens when the light
Bends or breaks.

Absorb, absorb, absorb...
Light soaks in.
Absorption happens when the light
Soaks in.

Transmit, transmit, transmit...
Light goes through.
Transmission happens when the light
Goes through.

Reflect, reflect, reflect...
Light bounces off.
Reflection happens when the light
Bounces off!
